JOB OBJECTIVE

Targeting to leverage over 6.8 years of experience in manual and automation testing methodologies to ensure high-quality software solutions.

CORE COMPETENCIES

- Software Development Lifecycle
- Software Testing Lifecycle (STLC)
- **Testing:** Manual Testing, Selenium Automation Testing on Python, API Automation Testing, & Regression Testing
- Test Case Design & Execution
- Software Quality Assurance
- Agile Methodologies
- Defect Tracking & Reporting
- Signoff & User Manual Documentation

TECHNICAL SKILLS

- **Testing Tools:** Selenium Webdriver with Python
- **Version Control Tool:** GitHub (https://github.com/NikBavane24/PythonProgram)
- **Framework:** Pytest
- **Test Management Tools:** JIRA, Azure Devops
- **DBMS:** MySQL Server 2014, SSMS (SQL Server Management Studio)
- **Test Scripting Languages:** Python, IDE-Pycharm
- **Web Technologies:** HTML, CSS

EDUCATION

2015: M.Tech. from Shivaji University, Kolhapur

2012: B.E. from Shivaji University, Kolhapur

PROFILE SUMMARY

- Results-driven **Software Quality Assurance professional** with experience in **Manual, API Automation & Selenium Automation Testing**, delivering high-quality software solutions.
- Expert in **Test Documentation**, designing and executing test cases aligned with business requirements.
- Skilled in **Automation Testing using Selenium WebDriver and Pytest**, enhancing testing efficiency and application performance.
- Experienced in **Agile Methodologies**, promoting collaboration and effective **defect tracking** within cross-functional teams.
- Proficient in **Performance and Regression Testing**, optimizing user experiences through comprehensive testing strategies.

WORK EXPERIENCE

Customized Energy Solution's, Pune | QA Analyst | Oct'21 – Apr'25

Project Undertaken: Energy Domain (MarketIQ, Product Based Company)

Description: This a web-based application primarily used to create meetings and reports for clients. Meetings can be scheduled based on different regions, and reports can be generated for various clients. The application provides a standardized workflow and dashboards for multiple clients, ensuring that each client has access only to the meetings and reports included in their subscription. Access is controlled through user role permissions, which include: **System_Admin, Admin, User, Client_Admin,** and **Client_User**.

Key Result Areas:

- Analyzed requirements & developed comprehensive test documentation.
- Designed & executed test cases in accordance with business requirements.
- Conducted a range of testing activities, including Functionality, Retesting, Smoke, Sanity, Regression, and Ad-hoc Testing.
- Reviewed Test Cases and related documentation for completeness and accuracy, generated sign-off reports based on feature assessments
- Ensured alignment with project requirements by reviewing High-Level and Low-Level Design documents while creating Test Consideration documents based on HLD/LLD specifications.
- Performed performance testing for users utilizing Jmeter tool.
- Developed test classes for API in Postman.
- Version control Tool GitHub.
- Performed automation testing of API with Postman tool.
- Engaged in defect triage meetings with cross-functional teams, promoted a collaborative team environment, and prepared weekly status reports for management meetings.
- Reported bugs and created bug-fix tasks using JIRA with Xray.
- Performed automation testing of UI with selenium Pytest framework.

TECHNOCRATS FORUM, Nashik | Test Engineer | Aug'18 – Sep'21

Project Undertaken: Core Banking System

Description: This web-based application is designed for core banking operations. It is primarily developed to allow users to check bank balances, view recent transactions, manage loans, fixed deposits, and more. The application provides workflows based on role-based permissions, including **System_Admin, Admin**, and **Client** roles.

PERSONAL DETAILS

- **Address:** Pune – 411017, Maharashtra
- **Date of Birth:** 24th Feb 1991
- **Languages Known:** English, Hindi, Marathi.

Key Result Areas:

- Analyzed requirements and designed test cases, developing comprehensive test documentation based on business needs.
- Conducted a range of testing activities, including Functionality, Retesting, Smoke, Sanity, Regression, and Ad-hoc Testing.
- Generated sign-off reports based on feature evaluations.
- Conducted manual testing.
- Developed test cases for API in Postman.
- Automate the API with Postman tool.
- Collaborated effectively with team members to ensure project success.
- Reported bugs and created bug-fix tasks using Azure Devops.
